4. a. The slope is 50, which means the helicopter altitude increases 50 ft/min. The y-intercept is 200, which means the roof of the building is 200 ft above ground level.

b. A slope of 85 means the helicopter’s altitude increases 85 ft/min. A y-intercept of 250 means the roof of the building is 250 ft above ground level.
Answers for Lesson 6-3, pp. 325–327  Exercises (cont.)

5. a. Yes, the candle burns continuously.
   
b. \( h = \text{height of candle in inches, and } t = \text{time in hours the candle has burned; } h = 8 - 2t \)
   
c. The graph of the line would be steeper, but the \( y \)-intercept would be the same.

6. a. \( h = \text{height of elevator in feet, and } t = \text{time in seconds; } h = 400 - 10t \)
   
b. [Graph of Height of Elevator]

   c. Answers may vary. Sample: If there are basement levels of the building, negatives are reasonable in the range.

7. a. Teen World. The slope of the line on the Teen World graph is less than the slope of the line on the Clothing Connection graph. This means that, for items with the same original price, the discounted price at Teen World will also be lower.
   
b. Clothing Connection: \( D = 0.8p \); Teen World: \( D = 0.6p \)
   
c. $12.80; $9.60

8. a–b. Check students’ work.

9. a. Yes; both time and distance are continuous.
   
b. The line will be less steep, because the kayakers are going more slowly. Since the kayakers are headed back to camp, the slope is negative.
10. a. The equations for both direct variations and linear equations have an \( x \)-term. A direct variation has no constant term, which means its graph must go through \((0, 0)\). Some linear functions like \( y = 2x + 0 \) are direct variations, but many like \( y = 2x + 3 \) are not.

b. Answers may vary. Sample: Altitude of skier coming down a mountain.

11. C

12. a. \( d = 7e \)

b. 84 dog years

13. a. \( C = 4(2.5 + 2g) \)

14. a. \( h = \frac{2}{3} m + 21.5 \)

b. 12 ft

c. The linear model is not a good model for this situation.

Answers for Lesson 6-6, pp. 346–348  Exercises (cont.)

46. \( y = x; \ y = -x + 1 \)

47. about \( \frac{5}{4} \)

48. Answers may vary. Sample: same slope of \( -\frac{1}{2} \)

49. Answers may vary. Sample: \( \frac{5}{4} \cdot -\frac{1}{2} \neq -1 \)

50. a. The units on the axes are different, so the screen is not square.
   
b. The lines appear perpendicular.

51. Answers may vary. Sample: \( y = 4x + 1 \)

52. No; the slopes are not equal.

53. No; the slopes are not neg. reciprocals.

54. Yes; same slopes and different \( y \)-intercepts

55. False; the product of two positive numbers can’t be \( -1 \).

56. True; \( y = x + 2 \) and \( y = x + 3 \) are parallel.

57. False; all direct variations go through the point \((0, 0)\). If they have the same slope, they are the same line, not parallel lines.

58. The slopes of \( \vec{AD} \) and \( \vec{BC} \) are both undefined, so they are parallel. The slopes of \( \vec{AB} \) and \( \vec{CD} \) are both \( \frac{2}{5} \), so they are parallel. The quadrilateral is a parallelogram.

59. The slope of \( \vec{JK} \) is \( \frac{1}{5} \). The slope of \( \vec{KL} \) is \( -2 \). The slope of \( \vec{LM} \) is \( \frac{1}{6} \). The slope of \( \vec{JM} \) is \( -4 \). The quadrilateral is not a parallelogram.

60. The slopes of \( \vec{PQ} \) and \( \vec{RS} \) are both \( -\frac{1}{2} \). The slopes of \( \vec{QR} \) and \( \vec{SP} \) are both \( -\frac{3}{2} \). The quadrilateral is a parallelogram.
61. The slopes of $\overrightarrow{AB}$ and $\overrightarrow{CD}$ are both $\frac{2}{5}$. The slopes of $\overrightarrow{BC}$ and $\overrightarrow{AD}$ are both $-\frac{5}{2}$. The product is $-1$, so the quadrilateral is a rectangle.

62. The slopes of $\overrightarrow{KL}$ and $\overrightarrow{MN}$ are both $-\frac{1}{6}$. The slopes of $\overrightarrow{LM}$ and $\overrightarrow{KN}$ are both 5. The product is not $-1$, so the quadrilateral is not a rectangle.

63. The slopes of $\overrightarrow{PQ}$ and $\overrightarrow{RS}$ are both $\frac{1}{2}$. The slopes of $\overrightarrow{PS}$ and $\overrightarrow{QR}$ are both $-2$. The product is $-1$, so the quadrilateral is a rectangle.

64. $\overrightarrow{BC}$ and $\overrightarrow{AD}$ both have a slope of zero. $\overrightarrow{BC}$ and $\overrightarrow{AD}$ are parallel. $\overrightarrow{AB}$ and $\overrightarrow{CD}$ both have a slope of $\frac{4}{3}$. $\overrightarrow{AB}$ and $\overrightarrow{CD}$ are parallel. The diagonal $\overrightarrow{BD}$ has a slope of $-2$. The diagonal $\overrightarrow{AC}$ has a slope of $\frac{1}{2}$. The diagonals are perpendicular. $\square ABCD$ is a rhombus.

65. $\overrightarrow{RP}$ has a slope of $\frac{2}{3}$. $\overrightarrow{RQ}$ has a slope of $-\frac{3}{2}$. $\overrightarrow{RP}$ is the neg. reciprocal of $\overrightarrow{RQ}$, so $\triangle PQR$ is a right triangle.
