

Properties of Water

- shape of water
 - ↳ bent / V shape
 - ↳ "mickey mouse"

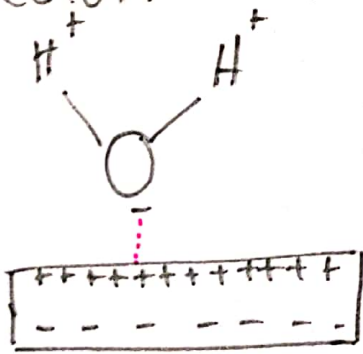

- Almost all water's unique properties are due to the shape and hydrogen bonding

hydrogen bond is the attraction/force that holds 2 diff water molecules together

1) Cohesion - water sticking to water

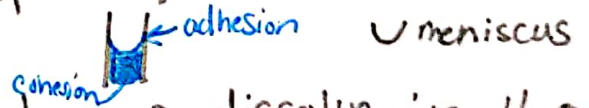

2) Adhesion - water sticking to other substances

a) surface tension

b) capillary action

3) Universal solvent - most substances dissolve in H₂O
